IP-ECM

Elevator Calling Module

IP-ECM is an elevator control module. All apartments connected to the TCP / IP, KNX and RS485 line can call the elevator to the floors or send it to the floor they want.

Sometimes You Race Against Time!

Although it may seem like a minor problem, sometimes it can be really annoying to wait for minutes at the elevator door. Thanks to INTERRA technology, you can keep your elevator ready without leaving your home via the Touch Panel or with your mobile devices.

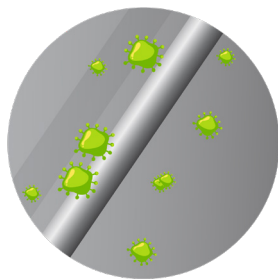

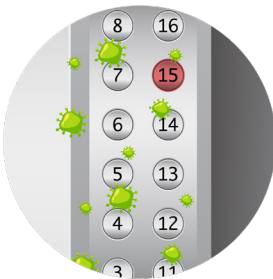

Although it looks like a small feature, it is actually a big feature for your health.

You can direct it to the floor you want without ever touching the outside elevator.

Your health is very important!

Due to today's disease Covid-19, we should live a non-contact life as much as we can. Interra detects you at the door of the elevator without any contact with presence sensors and calls the elevator for you.

In addition, when the Sensor detects the presence, it sends a notification to the display panel. In this way, you can be sure that the elevator will come.

You Have Complete Control!

With INTERRA, you can keep all the controls for the safety of your children. for example; When your child comes from school, you can send the elevator and recall it to the floor you want

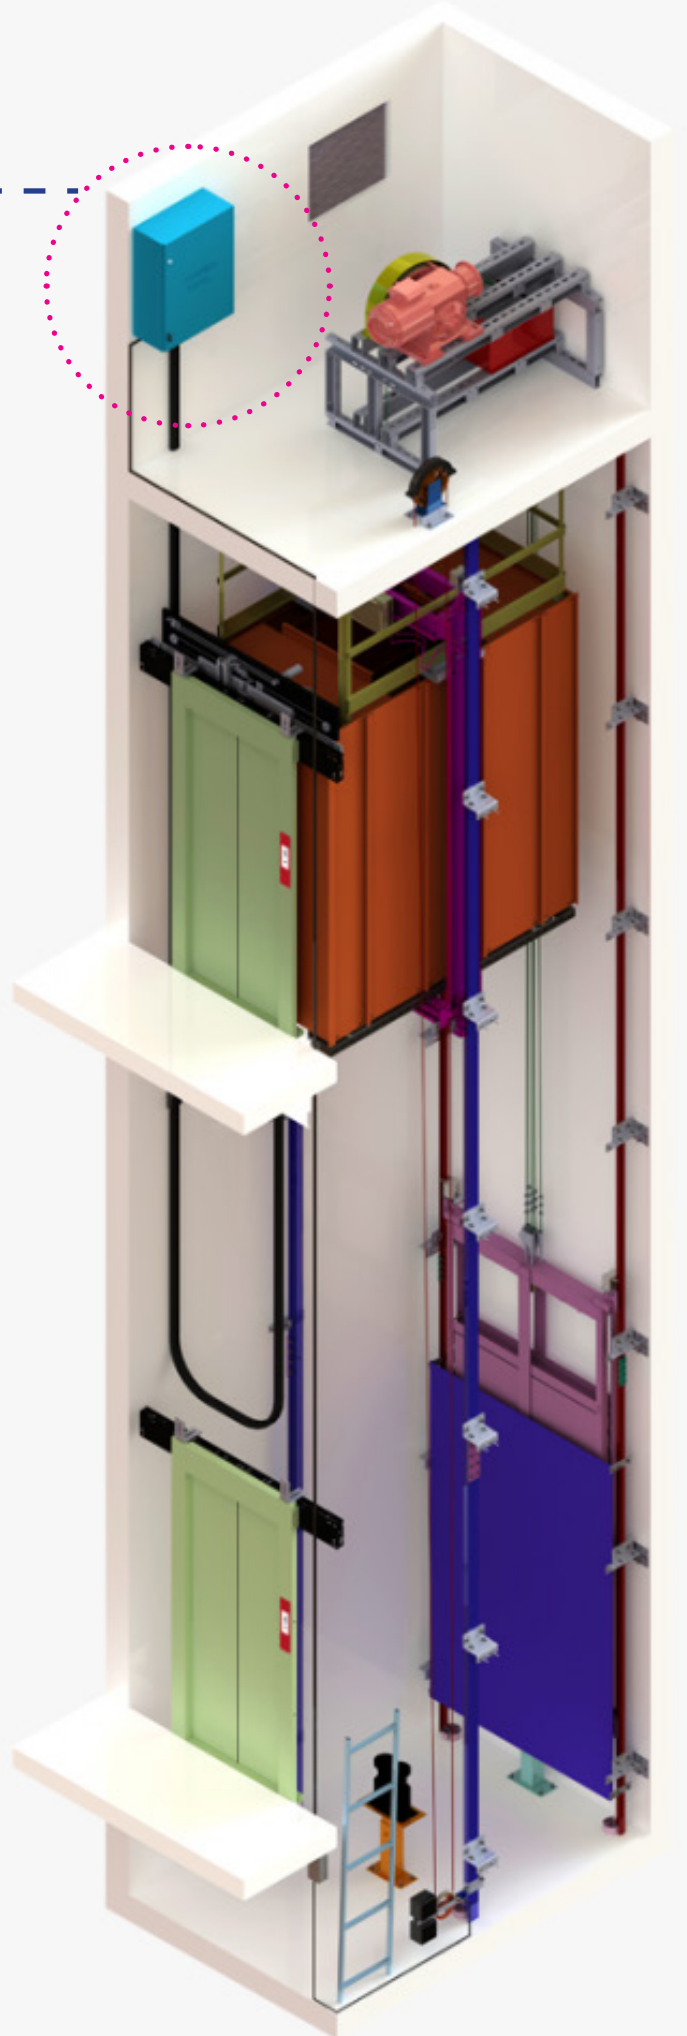

We Know No Barriers!

You can also control and manage interior elevators in 2 or 3-storey villa-type smart homes. It is an inevitable feature for people with disabilities in your family. You can easily direct the home elevator to every floor from your mobile devices.
